Education

Hogeschool Utrecht 2023-2027
Bachelor, HBO-ICT (Open-ICT)

ROC Flevoland 2020-2022
MBO 4, Software Developer

Work Experience

Delta10 Apr 2026-Present (part-time, concurrent with internship)
Developer, Utrecht
I kept working in the ops team during summer doing various tasks including:

- Creating bases for our future Networking and cluster Monitoring.
- Helping end customers adopt Haven+ in their Cloud
- I also contributed to the Flutter app's continued development.
- Though my interest in applied AI I helped accelerate our non-technical go live processes.

Delta10 Feb 2026-Feb 2027 (2 semesters)
Intern, Utrecht

- My assignment this internship is to build controller for Kubernetes to simplify user creation in various environments.
- This work can be found on github at `https://github.com/delta10/access-operator`
- Because I finished 3 months early I worked on our migration from Azure to a Cloudnative European alternative.
- Alongside this I made templates for our Networking and Monitoring to integrate with our FluxCD system.
- I was offered a job as a developer to keep working during the summer, among other things I contributed to the Flutter's app development.

Yivi Sep 2025-Jan 2026
Intern, Utrecht

- My assignment this internship was to build MFA functionality into the Yivi app.
- Because I finished this months ahead of schedule I worked on adding API key functionality to Postguard, an Identity based secure file sender.
- My work on Yivi and Postguard can be found on github: MFA app logic/Go side, MFA Flutter app code, and github.com/privacybydesign/Postguard

Hogeschool Utrecht Feb 2025-Jun 2025
Student assistant, Utrecht

- I helped first year students with their programming assignments, questions about the Open-ICT system and give feedback on work. I've learnt a lot about teaching and how to give better feedback to students.

Jaspers Media May 2022-Aug 2024
Full stack developer, Amsterdam

- After my internship I was hired on as a developer here, during my gap year. I was responsible for all critical bugfixes and pull requests as well as developing new features and making large performance improvements.

Jaspers Media Nov 2021-May 2022
Intern Software developer, Amsterdam

- At the start of my internship I was mostly busy rewriting our websites luier.nl and flap.nl (with a complete redesign) from Inertia.js to a Nuxt 3 and Laravel app with a focus on SEO and performance.
- Near the end of the internship the rewrite successfully went live.

Projects

Game Panel Addons Oct 2024-Present

- Together with my friend we sell functional additions for the popular open source game panel Pterodactyl, these have already sold over 550 copies, our software is used by over 20,000 game server owners.
- I was responsible for the back-end made using Go and Laravel.
- During this project I continuously learn more about customer relation management and service.
- Technically I learned a lot about writing secure, maintainable and performant code connecting different services together so users are able to install gameplay addons from multiple sources.
- Sales page: Arix Addons (hyperlink)

Hard Skills

These skills are roughly ordered by how comfortable I am with them, with the first being the most comfortable or experienced.

- **Languages:** Dutch (native), English (fluent)
- **Programming Languages:** Go, PHP, JavaScript, TypeScript, Rust, Dart
- **Frameworks:** Laravel, Flutter, Kubebuilder, Nuxt, TailwindCSS, Echo (Go)
- **Tools:** Git, Docker, Kubernetes, FluxCD, Figma
- **Databases:** MySQL/MariaDB, Redis, PostgreSQL, MongoDB
